Information regarding the contents and levels of metals in this product is available on the Internet at <http://www.aapfco.org/metals.htm>

Application Guide

<p>SOIL: One to two quarts per acre as needed. * Feast[®] Copper EDTA can be applied alone, with fertilizers or in combination with most pesticides. For most effective treatment, apply in a band at planting or shortly after as a sidedress.</p>
<p>FOLIAR: One half-pint to one quart per acre. When applied with water in ground spray equipment, use no more than 10 gallons of total spray solution per acre. When applied with aerial equipment, use no more than 5 gallons per acre of total spray solution. A quality wetting agent such as Saturall 85[®] or Rain-Fast[™] may be used to ensure even coverage. NOTE: If label directions are not followed for foliar application, phytotoxicity may occur. Foliar fertilization is intended as a supplement to a regular fertilization program and will not, by itself, provide all the nutrients normally required by agricultural crops.</p>

Wisconsin Users: Refer to supplemental sheets identifying state crops that have a medium to high copper demand, and Wisconsin appropriate application rates.

*Optimal rates can vary depending on soil conditions, extent of deficiency, type of crop and other factors. Conklin Company Inc. recommends the use of AgroVantage[®] soil and/or plant tissue analysis to accurately determine the quantities of any nutrient to be applied.
