### NEWEST PRODUCTS ADDED TO THE CONKLIN AGROVANTAGE SYSTEM: INTENSIFY® AND SYNTOSE FA

2018 looks like it is going to be a tremendous year for Conklin's AgroVantage System. The addition of two new products to Conklin's AgroVantage System—Intensify and Syntose FA—offers growers new and exciting opportunities to enhance farming operations, increase yields, and keep the cost per bushel of grain produced as low as possible.

Intensify is an EPA-registered plant growth regulator and contains two active ingredients that complement each other; Indolebutyric acid (IBA) stimulates root development, building the nutrient factory to the plant, and Gibberellic acid (GA3) promotes cell division and elongation, getting the plants out of the ground faster. This is extremely beneficial in cool, wet soil conditions. Intensify also increases flowering, enhances grain development, and triggers transitions from vegetative to reproductive growth. Each container of Intensify will treat 50 acres, and is intended to use with fertilizers or water in both soil and foliar applications. Learn more by watching World-Record Soybean Producer Kip Cullers explain the benefits of Intensify in this [informational video](#).

Conklin AgroVantage's other new product, Syntose FA liquid sugar, is a blend of readily available sugars, molasses, and fulvic acid, which is ideal for use on soils and plants. It is easily incorporated into current applications, making an additional trip across the field unnecessary. Syntose FA provides energy to stimulate microbial life in soil, promoting a healthy soil ecology. The fulvic acid (FA) is easily able to penetrate cells, aiding nutrient uptake.

Each pint of Syntose FA provides 1 pound of sugar. Intended for both soil and foliar applications, Syntose FA offers a proprietary combination of sugar sources and fulvic acid to complement fertility and spray programs.

### USING INTENSIFY AND SYNTOSE FA IN YOUR TEST PLOTS

With spring field work and planting scheduled to begin for some and already underway for others, Intensify and Syntose FA can easily be incorporated into farming operations. Both products give growers multiple methods to be included in existing application passes. For regional test plots, Intensify and Syntose FA are must-have products

to include in test plots this year. Don't miss this tremendous opportunity to include Intensify and Syntose FA to demonstrate the results these new products and technologies offer to AgroVantage System users.

### 2017 YIELD CONTEST WINNERS

Conklin recently recognized the 2017 yield contest winners who utilized its AgroVantage System products to achieve their contest winning yields. We're proud to honor these individuals for their efforts and achievements.

2017 provided a record-setting number of new bushel club members for Conklin and the AgroVantage System. These individuals have surpassed production levels to become members of Conklin's 100-Bushel Club (soybean and wheat), 200-Bushel Club (sorghum and milo), and 300-Bushel Club (corn).

- 2017 CONKLIN AGROVANTAGE STATE YIELD CONTEST WINNERS
- 2017 CONKLIN AGROVANTAGE NATIONAL YIELD CONTEST WINNERS
- 2017 NEW BUSHEL CLUB MEMBERS
- CORN BUSHEL CLUB MEMBERS
- SOYBEAN, SORGHUM, AND WHEAT BUSHEL CLUB
