### GET MORE HOURS OUT OF YOUR EQUIPMENT – “CONKLINIZE” IT!

Meet Buddy Myers of Duncan Falls, Ohio, a long-time Conklin Distributor, famous for his legendary 1970 John Deere “4020” tractor, the “Conklin Classic.” With over 34,000 hours (converts to over one million miles) of service, Buddy brags that he has saved more than \$150,000 in maintenance costs by using Conklin lubricants and conditioners on his farm equipment.

In 2018, Buddy finally had to invest in a few repairs for the Conklin Classic. “The injection pump had to go to the repair shop,” Buddy shared. “It was leaking fuel between the two halves... an O-ring had failed after almost 48 years. The repair shop also replaced a spring, a shaft, and some blades. Labor was \$375.00 and parts were \$322.00.”

*“Thank you Diesel Plus®! We would not want to farm without Conklin’s vehicle and lubrication products!”*

**Diesel Plus** diesel fuel conditioner is a multipurpose fuel additive that will solve year-round problems associated with diesel fuel systems.

### VEHICLE PRODUCTS TRAININGS

Check your calendar for 2019 Vehicle Products training programs. Go online to [www.conklin.com](http://www.conklin.com) and click on the Training & Events link on the bottom of the page.

All training programs held in Kansas City, Missouri, are conveniently held the day before or after Conklin Business Seminar, so plan now to attend the program that best fits your schedule.

- February 21, 2019
- June 7, 2019
- August 22, 2019

Register today and go the extra mile with Conklin Vehicle Products.

### ETHANOL FUELS NEED SYSTEMATIC APPROACH

Today, 97 percent of gasoline sold in America has ethanol in it. The exact amount of ethanol in the mix varies from state to state, however, in some states, you can find ethanol-free premium gas if you look for it. In general, though, you can expect that gasoline sold in the United States is around 10 percent ethanol.

4-Power G® and Fuel Mate Plus® are part of Conklin's systematic approach to keeping a fuel system clean while conditioning the fuel and improving the fuel's stability. Use Fuel Mate Plus (in every tank) and 4-Power G (every four months or 4,000 miles) for continual protection, and to maximize engine efficiency and performance.

Conklin's Fuel Mate Plus and 4-Power G address concerns some may have regarding ethanol fuels:

#### Fuel Mate Plus

- Antioxidants improve ethanol gas stability. Fuel stability is a heightened concern with ethanol fuel.
- Detergency keeps the fuel system clean. As Fuel Mate Plus is used in every tank, you get continual protection from deposits that are more likely to form from the degradation of ethanol fuels through phase separation.
- Inhibit fuel system rust and corrosion with Fuel Mate Plus. As moisture is increasingly likely in fuel containing ethanol, additional corrosion inhibitors found in Fuel Mate Plus provide added protection.

#### 4-Power G

- Aid in removing moisture from the fuel system with 4-Power G. Moisture is especially troublesome in ethanol fuels as it can build up quickly, accelerating the phase separation and degradation that follows. In turn, 4-Power G also protects against corrosion.
- Remove harmful deposits by cleaning out dangerous solvents. Ethanol's degradation leads to varnish and gum deposits that will reduce the efficiency of your vehicles and equipment and cause rough operation.
