### KEEP YOUR HARVESTING EQUIPMENT RUNNING SMOOTHLY

As soon as you consider the huge investment farmers make in harvesting equipment, you realize these essential machines need protection. There are a number of Conklin lubrication products that are vital in keeping this equipment running smoothly all season. While your first thoughts may go to engine oils and fuel additives, other Conklin vehicle and lubrication products play an important role.

Keeping your equipment performing at peak efficiency involves more than quality fuel and a clean fuel system. You need to make certain the cooling system is performing as expected to maintain proper operation temperatures. This is where **Safe® Radiator Coolant Conditioner** and **Dike® Temporary Radiator Stop Leak** come into play to keep your equipment running.

Safe Radiator Coolant Conditioner extends radiator and water pump life by protecting gasoline and diesel engines from rust and corrosion. Safe complements the coolant by decreasing the typical causes of engine overheating, including lime and scale buildup, while reducing foaming and minimizing the impact of electrolysis. It is compatible with all standard antifreeze.

The advanced formula of Dike Temporary Radiator Stop Leak seeks out and seals internal leaks, preventing antifreeze and water from seeping into the engine. Dike can temporarily fix leaks, allowing you to finish the job at hand before a permanent fix can be accomplished.

Protecting and lubricating bearings and equipment from weather and shock loads helps keep your equipment performing at peak levels. Conklin's extreme pressure lithium greases, **Rite-On®** conventional red grease and **Rhino®** parasynthetic grease with moly, provide protection in heavy shock load conditions. Molybdenum disulfide (Moly) offers a film that prevents metal-to-metal contact and provides anti-wear properties. Both Rite-On and Rhino are great for agricultural and construction equipment along with auto, truck, and bus lubrication.

### GET READY TO WINTERIZE

Colorful foliage, falling leaves, and cooler temperatures signal it's time to store away your summer equipment and get ready for winter. Small engines, as well as autos and power equipment, need proper care and maintenance so they will be ready for action when spring returns.

Conklin's **Fuel Mate Plus® Fuel Conditioner** helps prevent fuel varnishing in off-season storage of vehicles, motorcycles, snowmobiles, and watercraft. When outdoor temperatures dip below freezing levels and water vapor gets into your fuel lines, Fuel Mate Plus also acts as an antifreeze to help prevent frozen gas lines.

When used at the winter treatment rate, **Diesel Plus®** moisture-scavenging properties help remove moisture and aid in preventing bacteria from growing in the fuel. It also has the ability to lower the fuel's cold filter plugging point (CFPP) as much as 22°F, providing quick cold weather starts along with improved combustion.

Ensure you have the current fuel treatments from Conklin's Vehicle Products lineup as part of your winterizing program.

### PLANNING ON A MILLION MILES!

Though it's been described as "unbelievable," Convoy enthusiast Ben Welch owns - and still drives - a 1994 Suburban, now with 971,875 miles! He attributes this outstanding performance to his exclusive use of Conklin lubrication and vehicle products since purchasing his truck 25 years ago.

To find updated sell sheets go online to [www.conklin.com](http://www.conklin.com), login to **Conklin Central**, select the Documents Library, and search **Ben Welch** as key words for both documents.

**971875 MILES**  
And still going!

**The Power of Convoy**  
Convoy member Ben Welch, a Conklin customer since 1994, has over 971,875 miles on his 1994 Chevy Suburban. He attributes this outstanding performance to his exclusive use of Conklin lubrication and vehicle products since purchasing his truck 25 years ago.
