To obtain maximum benefits from this product, in starter and foliar applications, soil tests and/or tissue tests are recommended. For certain sensitive crops, only splitter or deep-placement (off seed) will be recommended by lab analysis. See row placement guidelines for proper placement.

**GENERAL GUIDELINES:** As a **starter fertilizer** application – maximum of up to six gallons per acre in-row (with the seed) or when using a splitter. As a **foliar fertilizer** application – maximum of three gallons per acre.

Under the following conditions the use of seed placement starter fertilizer may result in crop damage: low soil moisture, high soil nitrate levels, low soil organic matter content, extremely light sandy soils, soils high in sodium or soluble salts. Your own farm environmental conditions and experience are the most important when deciding to use a seed-contact starter fertilizer. Refer to product specification or crop recommendation sheets for usage information.
