

Specification Sheet

RAVE[®]

Rain Activated Vision Enhancer Glass Treatment

Benefits

- Repels and disperses moisture
- Reduces the adhesion of dust and debris on glass
- Improves day and night driving visibility during wet weather
- Lasts longer and performs better than other glass treatments
- Applies easily

Description

RAVE glass treatment bonds to glass surfaces, forming a clear film that repels and disperses moisture. The advanced technology formulation reduces the ability of liquids and solids to adhere to glass surfaces. RAVE improves driving visibility during rain, sleet, and snow. RAVE helps reduce stress by providing safer driving conditions. Off road equipment operators will appreciate RAVE's ability to prevent dust and dirt from adhering to glass, allowing for safer operation of equipment. Home windows and exterior fixtures treated with RAVE shed water quickly, allowing them to dry spot free. On all glass surfaces bugs, tree sap, dust, light frosts, and other solids are easier to clean off.

The Difference is Clear!

At hwy speeds and around town RAVE® coats glass surfaces with a clear film that repels dirt and moisture, improving visibility during day and night driving.

Applications

RAVE is formulated for use on vehicle and equipment windshields. Other uses include exterior glass fixtures and furniture, home windows, and glass shower doors.

Directions

Clean and thoroughly dry glass surfaces before treating. Apply RAVE to cloth and wipe on glass using a circular, overlapping motion. Allow to dry to a haze. Remove haze with clean damp cloth. If over applied it may be necessary to allow hazing a second time and wiping off with a dry cloth. For best results apply in shaded, cool area. Retreat as necessary.

Part Numbers

39123 - Single Bottle (8 oz.)
39131 - 6 (8 oz.) Bottles/cs.
