

Tips for Fertilizing Garden Plants with Feast 9-18-9

Vegetable and flower gardens before planting

Broadcast 1-2 qts/100 sq. ft. before planting. Apply with sprinkling can or Lawn Wheelie. Feast fertilizer does not need to be diluted but can be if it makes application easier. Work into soil 4 to 6 inches.

Transplanting vegetables and flowers into the garden

Dilute 1-2 oz (2-4 Tbsp.) Feast 9-18-9 in one gallon water. Use ½ to 1 cup in each transplanting hole.

Planting seedlings in the garden

Dilute 1-2 oz. (2-4 Tbsp.) Feast 9-18-9 in one gallon water. Use 1 qt. for 10-12 feet of row. Use 1-2 cups around larger individual plants. Apply once per month until fruiting (or until harvest with leafy vegetables).

House Plants

Dilute ½ oz. (1-2 Tbsp.) Feast 9-18-9 in one gallon water. Use in place of watering once per month.
