HOW TO CALCULATE THE ROOF SURFACE AREA OF A QUONSET ROOF

Formula:

π X Height X Length

 $\pi = 3.14$

Height = 16'

Length = 120'

Example:

 $3.14 \times 16 \times 120 = 6,028.8 \text{ sq feet}$

*DON'T FORGET TO ADD 20% FOR THE CORRUGATED STEEL

Final Results:

 $6,028.8 \times 1.2 = 7,234.56 \text{ total sq. feet}$
